

The **Héma-Québec Public Cord Blood Bank** has been in operation since 2004. The cord blood is collected at six different partner hospitals, and Héma-Québec takes care of registering and vetting donors, screening donations, and processing and preserving cord blood units for future transplants.

Héma-Québec's tools will help you get a better grasp of the donation process and your role as a donation recruiter. Your contribution on the front lines is crucial in promoting the Public Cord Blood Bank's growth. Your help saves lives!
